

URBAN TRAFFIC SYSTEM PRO 2018.1

Tutorial – Adding a traffic light system for the intersection.

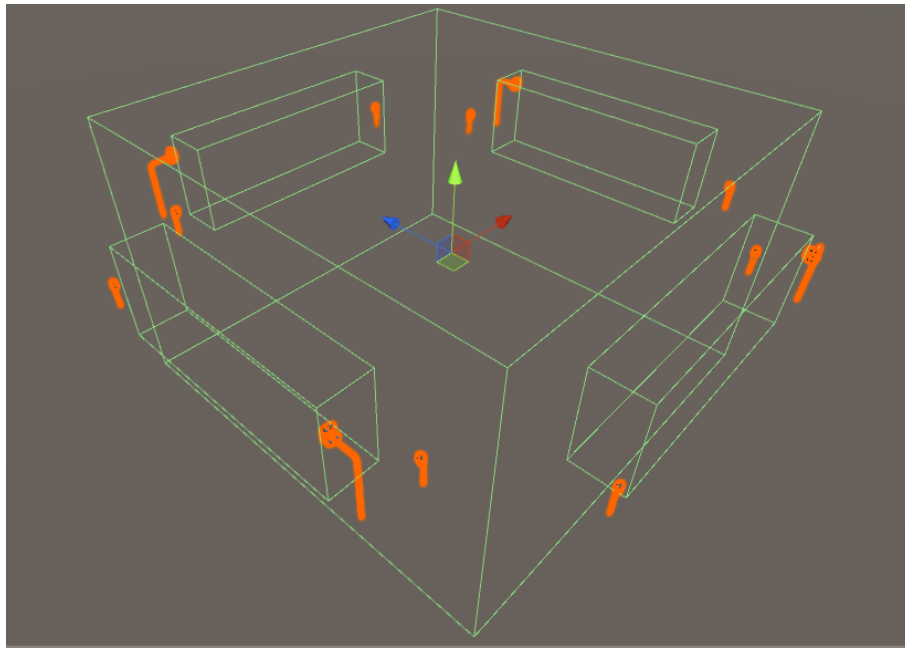

So, we have a crossroads and created paths for pedestrians and transport.

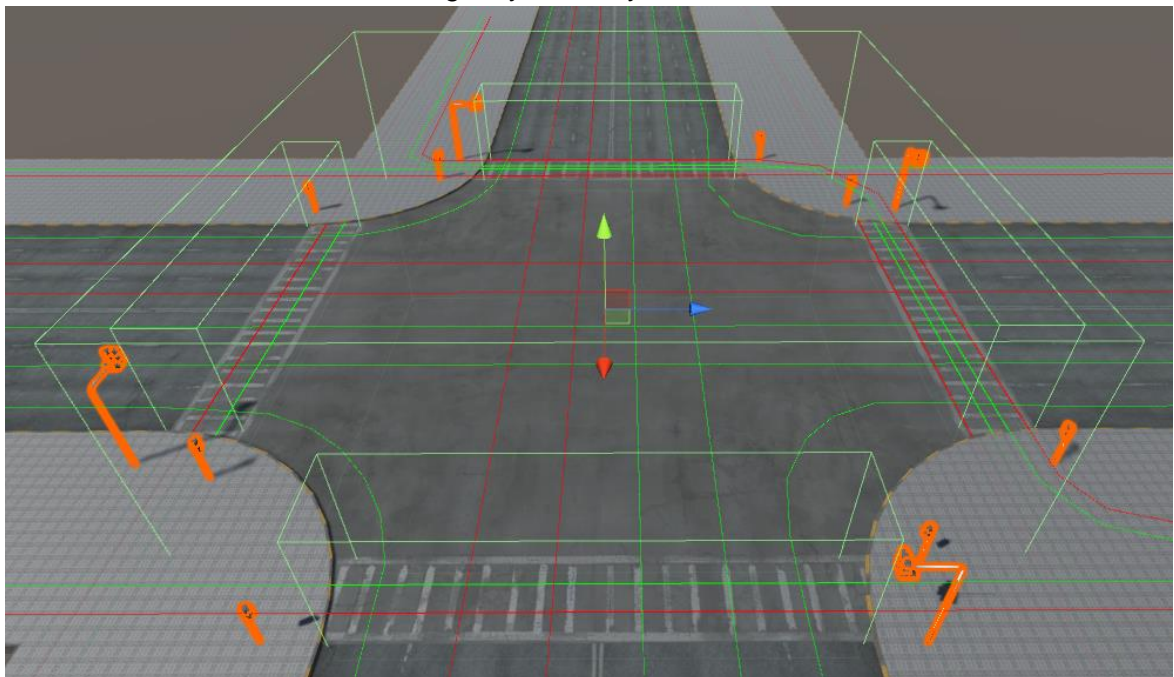

Add a system of traffic lights to the scene.

This is the Semaphore system for the intersection

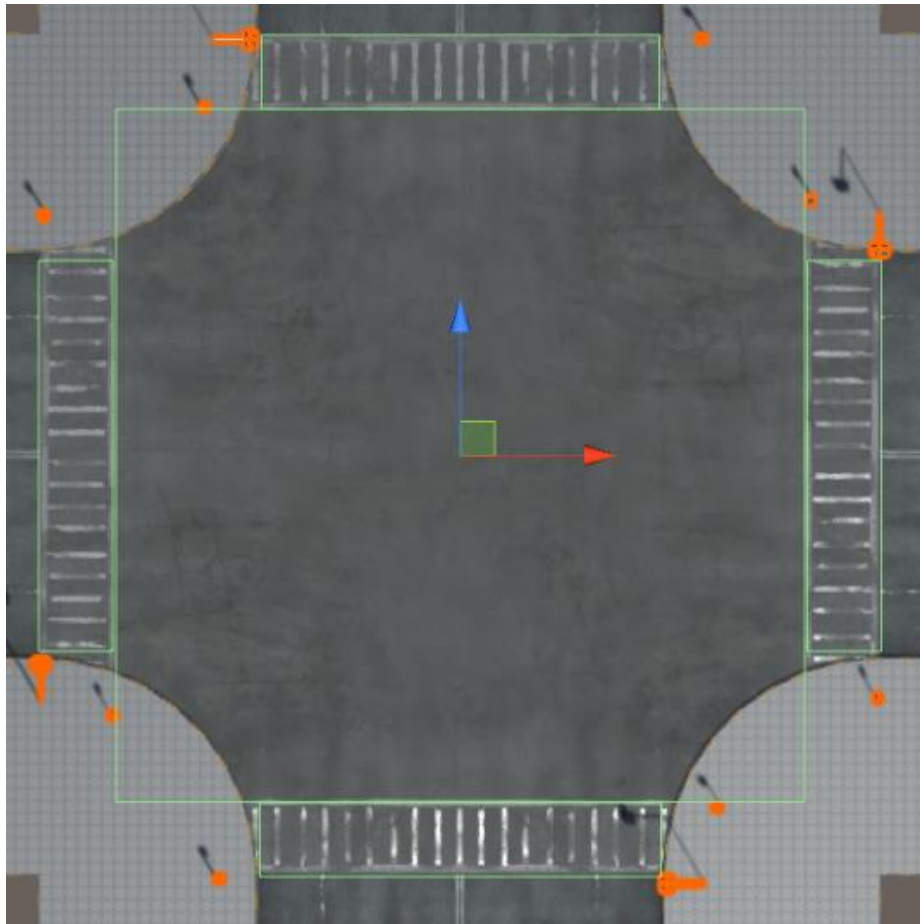

Set the traffic light system at your intersection

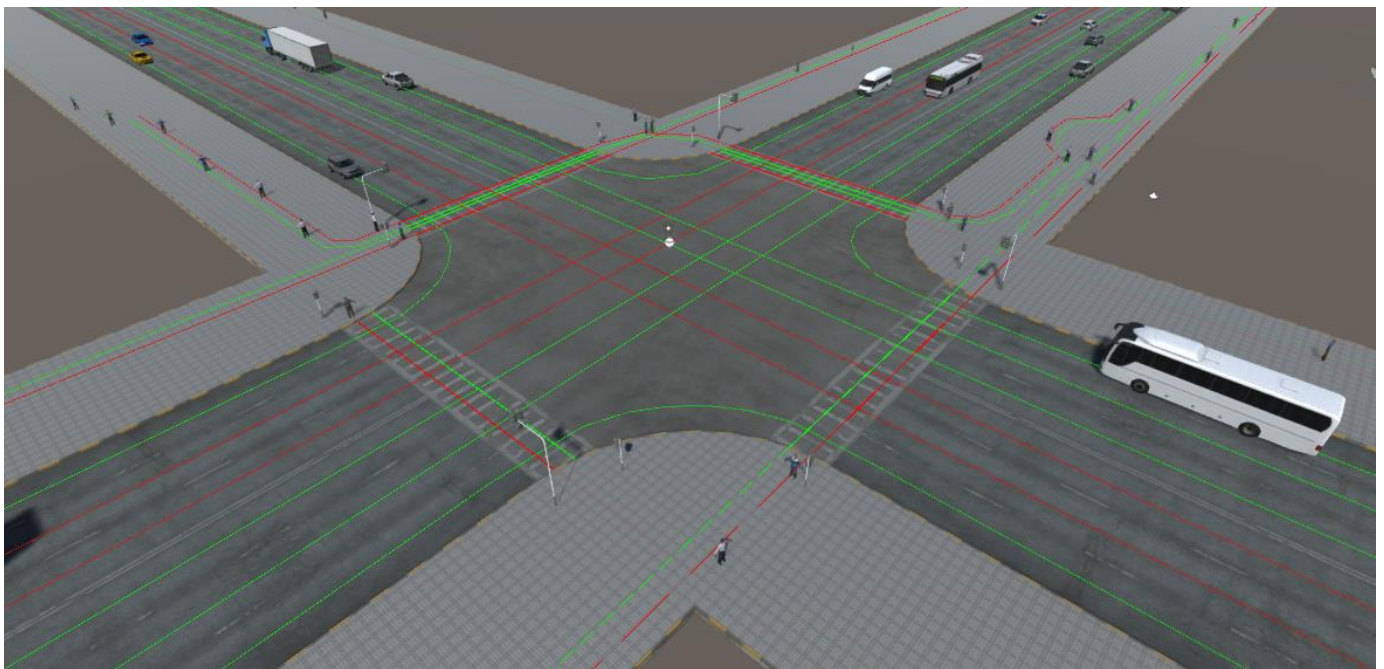

Install the traffic lights where you need them.

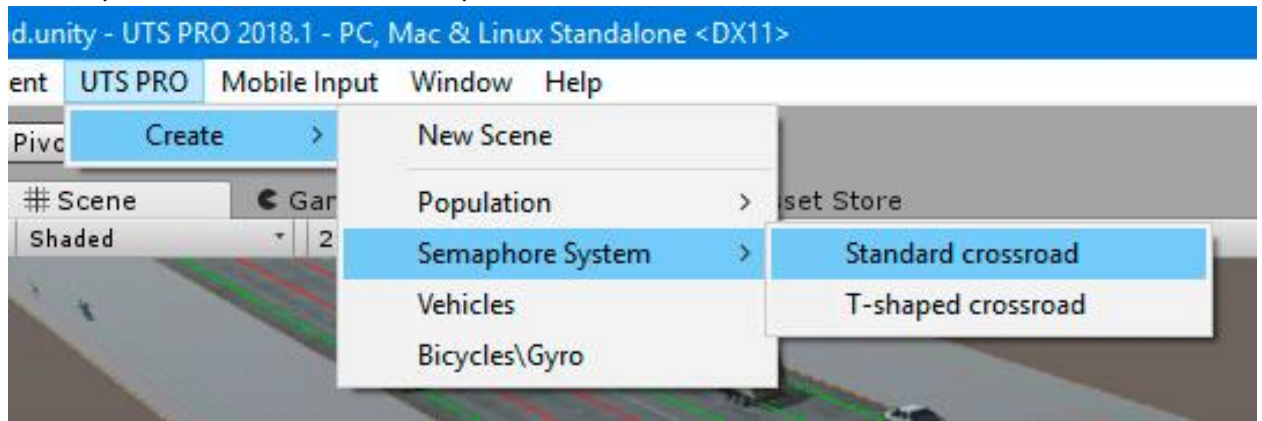

And also adjust the size of the colliders as in the picture.

Now everything is ready for the intersection.

At the moment, the project has two traffic light systems. For intersections with X - shaped movement, and T - shaped motion.

That's all! If you have any questions, please write to us by e-mail: aglobex3d@gmail.com

And we will be happy to answer your questions!

GOOD LOOK! 😊
